

# Deliverable 4

Prepared by: Shaina Mainar, David Spry, AJ Williams

## Experiences

The team was ahead at time of the last deliverable, having already completed 25 test cases. Our time was spent beautifying the project and revising deliverable #3. We decided to change some parts of the code to make the test results look more interesting. This change has led to numerous test case changes. The team has reworked the equations for test cases to get new oracles. The html document created by the script was also revised to look more professional using CSS.

## Example of new test report

The screenshot shows a web browser window displaying a test report. The browser's address bar shows the URL 'http://localhost:3000/'. The page title is 'Sugar Desktop App' and the date is 'Mon Nov 11 15:21:44 EST 2019'. The report is titled 'Test Results' and contains a table with the following data:

Test Case	Requirement	Method	Input	Output
01	Accept positive integer, output the birth time stamp based on the input	agepicker.calculate_birth_timestamp	5	107
02	Accepts zero as an input, output birth time stamp based on the input	agepicker.calculate_birth_timestamp	0	123

## Revised Framework Architecture
